1. Create registration page in html with user name, email and phone number and by using POST method display it in next html page.

```
<!DOCTYPE html>
<html>

<head>
  <title>Sample registration page</title>
  <meta charset="UTF-8">
  <h1>Registration Page</h1><br>
  <script type="text/javascript">
    function callvalue() {
      var n = document.getElementById("name").value;
      var email = document.getElementById("email").value; var
      mobile = document.getElementById("no").value;
      document.writeln("<b>Your info:<b>" + "<br><br>");
      document.writeln("Name:" + n + "<br><br>");
      document.writeln("Your email:" + email + "<br><br>");
      document.writeln("Your mobile no:" + mobile);
    }
  </script>
</head>

<body style="background-color:rgb(230, 228, 228);text-align:center;">
  <form onsubmit="callvalue()">
    <label><b>Username</b></label>
    <input type="text" placeholder="Enter username" id="name" size="15"
required><br><br>
    <label><b>Email</b></label>
    <input type="email" placeholder="Enter email" id="email" size="15"
required><br><br>
    <label><b>Roll Number</b></label>
    <input type="number" placeholder="Enter roll number" id="no" size="15"
required><br><br>
    <label><b>Password</b></label>
    <input type="text" placeholder="enter password" size="15" required><br><br>
    <input type="submit" id="mySubmit" value="Register"
POST="METHOD"><br><br>
  </form>
</body>
</html>
```

## Registration Page

**Username**

**Email**

**Roll Number**

**Password**

2. Develop a flask program which should contain at least 5 packages used from pypi.org.

**Step 1: creating web using flask app**

**Source code :**

```
from flask import Flask, redirect, url_for, request
app = Flask(__name__)
@app.route('/success/')
def success(name):
    return 'welcome %s' % name
@app.route('/login', methods=['POST', 'GET'])
```

```

def login():
if request.method == 'POST':
user = request.form['nm'] return redirect(url_for('success', name=user))
else:
user = request.args.get('nm')
return redirect(url_for('success', name=user))
if __name__ == '__main__':
app.run(debug=True)

```

## HTML Templates:

```

Base.html :(bootstrap)
<!doctype html>
<html>
<head>
<title>{% block content %} {% endblock %}</title>
</head>
<body>
<h1>Sab's website</h1>
{% block content %}
{% endblock %}
</body>
</html>

```

## Index.html:

```

</html>Index.html:
<html>
<body>
<form action = "http://localhost:5000/login" method = "post">
<p>Enter Name:</p>
<p><input type = "text" name = "nm" /></p>
<p><input type = "submit" value = "submit" /></p>
</form>
</body>
</html>

```
